

I GET AN ERROR CODE: 00000005

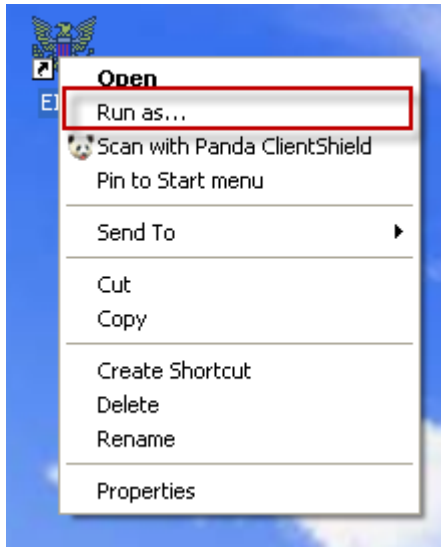

PROBLEM: When you install and unlock the application as one user (admin, for example) and then run the application as another user.

Try the following:

1) Right-click on EILA icon.

2) Select **Run as...**

3) Select the Administrator

4) If you no longer get the 00000005 error then your security and rights settings is causing this.
